

The wind analysis shows comfort levels at pedestrian height for the whole area. This is a yearly analysis, using the wind statistics for the site in Bergen. The analysis was carried out for 8 wind directions, as shown in the wind rose. The results show most of the project has wind speeds lower than 4 m/s for 95% of the year. According to the Lawson LDDC Comfort criteria, most of the comfort levels of the project are suitable for Pedestrian Sitting, and some areas are suitable for Outdoor Dining.
